

Dekalb® Corn
DKC63-87 Brand
(GENVT2P)

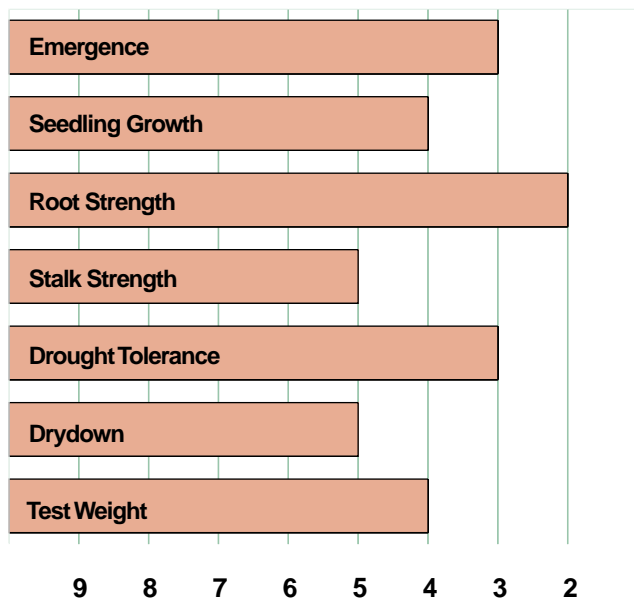

DKC63-87 Brand (GENVT2P)

113-DAY RM

DKC63-87 (GENVT2P) is an offensive 113RM product that has excellent top-end yield potential and should be positioned on the most productive soil types.

Product Brand Characteristics		
Category	Characteristic	Value
MANAGEMENT	Value Added Trait	GENVT2P
	Insect Resistance Management	Y
	Processor Preferred®	HFC
	Relative Maturity	113
	GDUs to Mid-pollination	1360
	GDUs to Black Layer	2825
	Average for Maturity	1380

HERBICIDE	Growth Regulators Sensitivity	A
	Sulfonylureas Sensitivity	A
	Isoxazoles Sensitivity	C

Key Strengths

- Best suited to high-yield production systems
- Good overall disease tolerance
- Impressive root strength

Management Tips

- Adapted to a wide range of seeding rates
- Performs best when grown in rotation with other crops
- Avoid pre-emergence applications of Pigment Inhibitor herbicide applications
- Manage soil fertility to better manage late-season stalks

Based on Dekalb conducted trials. Relative to other Dekalb brand products. Rating Scale: 1-2=Excellent, 3-4=Very Good, 5-6=Good, 7-8=Fair, 9=Poor. Traits for which no rating value is shown were not rated for this product.

Rating Scale:

1-2 = Excellent
 3-4 = Very Good
 5-6 = Good
 7-8 = Fair
 9 = Poor

The ratings are approximate and should not be considered as absolute. Based on Monsanto conducted trials relative to other Asgrow and DEKALB brand corn.

Herbicide Class Ratings:

Ratings are based on observations and research using herbicides at and above labeled rates to simulate extreme environmental conditions, misapplication and adverse soil pH or organic content.

A = Acceptable

Either no adverse effects from the corn product/ herbicide combination were noted on any traits or only slight damage could be noted under adverse conditions or herbicide application at higher than label rates.

C = Caution

The corn product/herbicide combination is usually not a problem if sprayed according to label directions, but can result in plant height reduction, stand loss and suspected yield loss under very adverse environmental conditions, high rates, or extreme soil pH levels or organic content. Use drop nozzle spraying for postemergence herbicides or plant in warm soils for incorporated herbicides to avoid interactions.

W = Warning

Not advised - this corn product/herbicide combination should not be used under any circumstances.

GDU (Growing Degree Unit):

Although maturity of one corn product relative to another remains reasonably constant, the actual number of calendar days from planting to any given point of plant development varies with temperature, day length, rate and date of planting, soil fertility and other environmental factors. All GDU values calculated are from the time of planting.

Before opening a bag of seed, be sure to read, understand and accept the stewardship requirements, **including applicable refuge requirements for insect resistance management**, for the biotechnology traits expressed in the seed as set forth in the Monsanto Technology/Stewardship Agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with the most recent stewardship requirements.

B.t. products may not yet be registered in all states. Check with your Monsanto representative for the registration status in your state.

IMPORTANT IRM INFORMATION: RIB Complete™ corn does not require the planting of a structured refuge **except** in the Cotton-Growing Area where corn earworm is a significant pest. **Genuity® SmartStax® RIB Complete™ and Genuity® VT Double PRO® RIB Complete™** corn are blended seed corn products. See the IRM/Grower Guide for additional information. Always read and follow IRM requirements.
